

INDUSTRIAL-GRADE PACKAGING PANELS

West Fraser has developed, engineered and manufactured panels specifically for the packaging industry. Consultations with the packaging industry revealed their top priorities which included the ability to reduce cutting, minimize handling and reduce waste while maximizing savings.

West Fraser's technical team developed a panel specifically for the packaging industry to meet or exceed the packaging industry's priorities.

THE WEST FRASER SOLUTION – STEADIPACK THE INDUSTRIAL-GRADE PACKAGING PANELS:

- Specifically designed for the crating and packaging industries (bases, walls, tops)
- Thicknesses available from 7/16 up to 1-1/8 in standard 4x8 panel size
- Custom panel lengths* are available to reduce cutting, handling and waste
- Special layups and enhanced resin formulations to provide stiffer panels that stay flat
- Speed up assembly with no core voids or panel delamination
- Specific packaging quality protocols to ensure constancy from panel to panel
- Higher internal bond for better holding power for screws, nails, and staples
- Panels are lighter, easy to work with and create less wear and tear on tools and equipment
- Mill certified for the packaging industry
